

Neff-dynamisV II®

NEFF Presses with dynamisV II®-Technology are the **fastest in the world**. Thanks to a very high closing–and forming speed, the **cycle time** incl. the pressure build–up time are **reduced enormously**.

Once the component is formed, it is cooled down, while the force of the press is kept, within a few seconds to below 180 °C with the aid of a cooling system which is integrated into the tool, and hardened in the process.

With the NEFF dynamisV II®-Technology, you increase cycle and output and generate a **significant increase in revenue**. Secure a profit making and future–oriented production performance with the dynamisV II®.

Advantages

- Fast lowering–and return speeds
≥1200 mm/s
- Forming speed up to 650 mm/s
- Maximum possible press stiffness for optimum surface cooling
to increase the output performance
- Drive concept for the independence
from cooling times
- Best production performance

NEFF has been awarded the Blechnet-Award 2015 and the AEE-Innovation-Star 2015!
